

## NEWSLETTER

of the MIDWEST CHAPTER, FRIENDS OF MINERALOGY, INC.

Volume VIII: No. 3

May 31st, 1994

## PRESPROSE :

I'll be on my way west with a van full of Geology students by the time you receive this newsletter. Knowing that all of our affairs are in capable hands makes it possible to depart with a light heart. V. Pres. Al Sicree has a speaker for June (see announcement below), V. Pres. Mike Davis has a lineup of field trips for the Summer (announcements enclosed), Secty/Treas. \ Sylvia Sicree is up to date with the minutes. of our last meeting and our financial records and our red-haired raconteur. Nelson Shaffer, is on the schedule to talk at our June meeting. Nelson has studied meteorites and their mineralogy for more than 20 years and has published several articles on them. Could one ask for more!

## SPEAKER

SATURDAY, June 18, 4PM Monroe C. 4-H Fairgrounds

NELSON SHAFFER, Indiana Geological Survey "METEORITES! EXOTIC ROCKS I HAVE KNOWN"

A short business meeting will follow the talk

## ANNOUNCEMENTS:

- O BE SURE to COMPLETE and MAIL the Membership Information Form you received in the last National FRIENDS OF MINER-ALOGY NEWSLETTER. This is especially important if you want to help communication between FM members and to get YOUR name in the national directory.
- there WILL be a place for our September meeting at the Greenfield, IN. Gem & Mineral Show. This is a result of his effective negotiations with a Fair Board that had earlier denied use of the show barn where we usually meet. Thanks, Wendel!!!
- In an effort to reach out and share our enjoyment of collecting mineral specimens with young people, the Executive committee agreed to recommend that you invite a local school teacher to come with you on a collecting trip. This might be an Earth Science teacher or a Chemistry teacher or a gradeschool teacher that would enjoy having a collection of minerals to use in the classroom. There are several collecting trips scheduled this Summer and it would be helpful to quarry operators, teachers and eventually their students, for the teachers to learn more about the mineral industry and the beauty of minerals. Don't be shy; if you don't know a local teacher, call the Princi-Cheers! Hal Roepke, Pres. '94

Purposes of the Midwest Chapter:

1. To promote interest in and knowledge of mineralogy.

2. To advance mineralogical education.

3. To protect and preserve mineral specimens and promote conservation of mineral localities.

4. To further cooperation between amateur and professional and encourage collection of minerals for educational value.

5. To support publications about mineralogy and about the programs of kindred organizations.

## FIELD TRIP! COLLECTING! FIELD TRIP!

SATURDAY, JUNE 25TH The Stoneco Auglaize Quarry at Junction, OH, will be open to us from 7:30AM - noon (EDT). The quarry is located about 10 miles south of Defiance, OH. To get there one may take US Hwy. 24 to Defiance, State Hwy 111 southwest to Junction, State Road 637 east from Junction, across the Auglaize River, turn south on route 179 and go about a mile. The quarry is on the left (east) side of the road and one may find Fluorite, Calcite, Sphalerite and Quartz.

SATURDAY, JULY 16TH The quarry at Danville, KY will be open to us from 8:00AM - 12 or 1PM (EDT). This is limited to 15 people so call Mike Davis (513)923-1650 for more information and to reserve a place! Collecting may include Barite, Fluorite and Calcite.

SATURDAY, AUGUST 27TH The quarry at Maybe, MI is open from 8:00AM - noon (EDT), for up to 24 people. Again, call Mike for reservations. You may have a map to this quarry from last year's trip; if not call Mike. This is generally a great place to collect Sulfur, Celestite and Fluorite.

More trips are in the planning stages for late July or August and for September and October If you would like to suggest a collecting trip for the Club please call Mike!

HAPPY HUNTING!

MINUTES OF MEETING 4:00PM, APRIL 29, 1994

After a well-attended and well-received talk by Dr. Terry Wallace, on Earthquakes, our short business meeting was opened by Pres. Hal Roepke.

The minutes of the meeting March 12th were approved as printed in the Newsletter. The Treasurer reported a balance of \$708.72.

The Executive Committee had met earlier in the afternoon and decided not to spend any of our funds on educational projects at this time in order to save money for a larger project. We can pursue inexpensive alternatives at this time. For example: each of us as individuals can contact local school teachers (Earth Science, Chemistry, Grade-School, etc) and explain our goals, offer membership and invite any who are interested to go with us on a collecting trip. We can also offer to help in other ways (provide specimens for use in the classroom, lead a class on a collecting trip, etc). Pres. Hal is to contact the National Science Teachers Association to let them know about our organization.

National Friends of Mineralogy is updating it's directory. Please fill out and mail the questionnaire that is in the May National FM Newsletter.

New Federal Regulations are being proposed that would prohibit the taking of any mineral substance from Federal lands. Let your Senator and the Dept. of the Interior know your views on this right away.

Our Geode display will debut at the May 7-8 Show at Troy, OH.

Fred Lewis has designed a new logo for our chapter. It will appear soon.

The meeting adjourned at 4:40pm.

Sylvia Sicree, Secretary/Treasurer

## CALENDAR OF EVENTS - 1994

September 9-11, 1994. 500 EARTH
 SCIENCES Gem and Mineral Show, Hancock Co 4-H Fairgrounds, Greenfield, IN
 September 24-25, 1994. Eastern Indiana
 Gem and Geological Soc. SWAP, Wayne
 Co. 4-H Fairgrounds, Richmond, IN
 October 14-16, 1994. Three Rivers Gem
 & Mineral Soc. Show, Allen Co. Fairgrounds, Ft. Wayne, IN

## MIDWEST CHAPTER, FRIENDS OF MINERALOGY, INC.

## INFORMATION ABOUT THE MIDWEST CHAPTER

HISTORY: The Midwest Chapter of the Friends of Mineralogy, Inc. was formed as the Indiana Chapter in January of 1987, and has been active since then in promoting interest in minerals, focusing primarily, but not exclusively, on the mineralogy of Indiana and its neighboring states. The Chapter is chartered by the national Friends of Mineralogy, is incorporated by the State of Indiana, and is a tax-exempt 501(c)(3) educational and scientific organization, with about 50 paid members as of April, 1994.

## PURPOSES:

- 1. To promote interest in and knowledge of mineralogy.
- 2. To advance mineralogical education.
- 3. To protect and preserve mineral specimens and promote conservation of mineral localities.
- 4. To further cooperation between amateur and professional and encourage collection of minerals for educational value.
- 5. To support publications about mineralogy and about the programs of kindred organizations.

MEMBERSHIP: Open to any person regardless of residence or level of knowledge about minerals. Current members come from six states, and include both professionals and amateurs. Members also belong to the national organization of Friends of Mineralogy.

MEETINGS: Held 6 times a year at the Indiana State Museum, 202 N. Alabama St., Indianapolis, or at various mineral shows in the area. Meetings are open to the general public, and are free of charge.

FIELD TRIPS: To area mines and quarries. Participation is limited to members of our Chapter, to members of other FM chapters, and on a one-time introductory basis, to prospective members. The Chapter carries liability insurance.

OFFICERS: The officers of the Midwest Chapter for 1994 are:

President: Dr. Hal Roepke, 4806 W. University, Muncie, IN 47304; 317/284-7929(H), 317/285-8266(O)

First Vice President: Albert Sicree, 4052 Butterwood Ct., Dayton, OH 45424; 513/236-1320(H) Second Vice President: Mike Davis, 5875 Fawnridge Court, Cincinnati OH, 45239

Secretary/Treasurer: Sylvia Sicree, 4052 Butterwood Ct., Dayton, OH 45424; 513/236-1320

HOW TO JOIN: Mail the completed form on the back of this sheet with your dues (\$15.00 for the first person in a family, \$8.00 for any additional family members) to Sylvia Sicree at the address given above. The dues cover chapter and national dues, and liability insurance.

# Safety Tips for Rockhounds

North Carolina is endowed with a large variety of minerals. Many of those minerals are prized semi-precious and precious gemistanes, athers are collectors specimens and valuable are. These gemistanes and minerals are sought throughout the state by Tar Heel and tainist recknowness.

Mitherial and given only alternation can be entogable relaxing, and at times, recilitable. Many pockhowneds and collectors thave amassed collectors of aparimens whele insured also proud also proved the providents of the providen

There have liven tatalities that sent his intuities to prechaunds in North Carolina harantse that failed to observe doubthor solicy solicy practices. Pt. 150 "Ke time to study there "DO'S and DON'TS". And fully Following this common sense attace can save cour life!!

# For further information on tockhound safety, confact:

Mine and Quarm Division North Carolina Department of Labor 501 North Blannt Sned Raleigh, NC 27504

## Phone: 019 733-7428

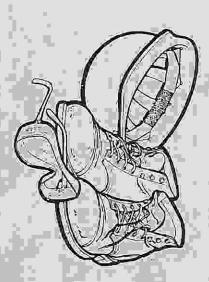

## For information on mineral collecting tes, contact:

North Carolina Department of Natural Resources and Community Development Geological Survey Section 512 North Salishury Street P.O. Box 27/587 Raleigh, NC 27/611

Phone: 919 733-2423

- 1. Plan your work in advance. Follow your plan.
  Tell your family, rockhounding partner, and property owners your schedule. Planning will make your rockhounding more enjoyable and less hazardous. If you have a plan and become lost, help can arrive quicker
- 2. Know the area in which you are rock-hounding. Know how to get emergency aid and where to telephone for help. If an emergency should anse, knowing how and where to get help can mean the difference between life and death.
- Obtain the services of a competent guide who knows the area in which you are rackhounding. The guide can help you select rock hounding sites and can protect you from dangerous conditions.
- Get the landowner's permission before going on the property. Asking permission will show your respect for the landowner's property. The landowner will also have the opportunity to tell you about any hazards on the property.
- 5. Cantact the operator before going onto the property of an operating mine. Most mines use explosives to break the rock. Anyone who trespasses upon property where shots are fired is in great danger. High walls and equipment in operation also present dangerous situations. A miner or mine official should go with you when you rockhound at an operating mine.

- 6. Wear personal protective equipment when rockhounding. Proper attire for rockhounding includes safety glasses, hard-toed shoes, hard hats, and gloves. Rugged clothing will provide additional protection from flying fragments and sharp rocks.
- Carry a first aid kit. First aid training makes you
  more safety conscious. Become a certified first
  aider if possible. Certified first-aiders can help
  themselves and others if injured.
- Use extreme caution when hunting for specimens in an area where underground mining has been conducted. Caved workings and openings hidden by undergrowth are potenital hazards.
- Watch out for and keep up with small children and inexperienced adults who rockhound with you. Unless a person knows the hazards present in rockhounding, he or she may suffer injury if unattended.

Good advice - even in the Midwest

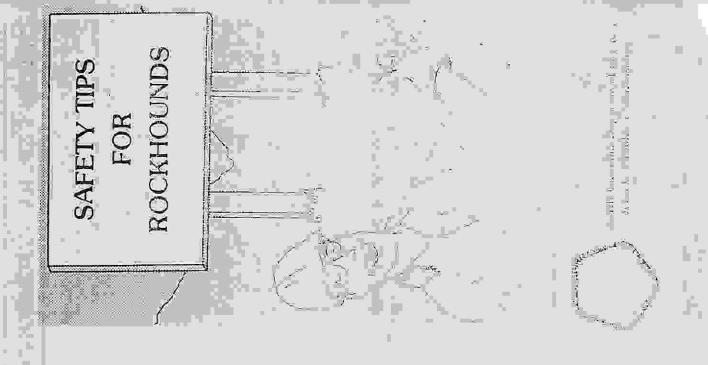

# Good rockhounding is safe rockhounding!

## DO NOT:

- Do not work alone. The difference between life and death in an emergency situation can be the presence (or absence) of someone who can help you and summon help.
- 2. Do not enter a trench, cut, or excavation unless the walls have been sloped to a safe angle. All rockhounding excavations greater than 42" deep should be dug upon a two-to: one slope one that is four times as wide at the surface as it is deep. Any such cut or excavation less than 42" deep should be dug on a one-to: one slope one that is twice as wide at the surface as it is deep. Improper sloping is dangerous. The walls may cave in without warning if they are not sloped properly.
- 3. Do not work under or near high vertical walls in an abandoned open pit, mine, quarry, or any other place. Digging below walls that are fractured or loose may cause rock to fall without warning.
- Do not dig into mine dumps, creating steep or vertical utilis. Steep or vertical walls can cave in without warning and present hazards from large rolling or falling materials.
- 5. Do not work or go near the edges of high steep walls. The edge of the mine wall may cave in. If you slip on the edge of a wall, you may have a serious or fatal injury.
- Do not pile dirt and rocks near the edge of an excuvation. All dirt and rocks should be put at a

safe distance from the excavation. Dirt and rocks piled at the edge of an excavation contribute to the caving hazard by adding weight.

- 7. Do not work around mines or excavations that have deep water present, unless you wear an approved life preserver. If you slip or fall into deep water when fully clothed, you may drown unless you are wearing a life preserver.
- 8. Do not enter any abandoned underground workings mine shafts, raises, winzes, or adits no matter how safe they seem. Unstable ground in the mine roof and walls may fall or eave in. Decayed timber or loose material may hide hazardous openings. Underground mine workings can also contain harmful gases, and oxygen-deflicient air may be present in underground mine workings.
- 9. Do not attempt to go underground with any diggings, unless you are experienced in underground mining and follow all safe mining practices. Many hazards exist in underground workings. Adequate ground control, ventilation, and stabilization must be provided. There are many other important considerations for working underground.
- 10. Do not use explosives unless you are experienced in their use. Only professionals should use explosives. Improper use of explosives can result in death or serious injury to the user and onlookers. Most rockhounding sites prohibit the use of explosives.
